

AUTOMATIC BIRD SCALES

Automatic bird scales enable the flock manager to check the daily status of bird weights and track overall progression of bird growth. This feature automatically detects when a bird perches on the scale and records the bird's weight. Bird weights are taken throughout the day and averages are calculated daily.

- Displays current scale reading, along with the day's detected high, low and average weights
- Chart average daily flock weights
- Graph flock's target vs. actual bird weights
- Graph bird weight uniformity
- Transportable scale for weighing at different locations
- Auto adjusts for dirty scale and corrects weighed values
- Auto adjusts for multiple birds on the scale at the same time
